*Priority registration given to IU Health Behavioral Health
Employees, pending availability, training may be open to all.*

The Tobacco Treatment Specialist Core Training is an intensive four-day, in-person, evidence-based training program for persons who work with tobacco-and-nicotine dependent clients. Designed by the University of Massachusetts Medical School (UMass), the training curriculum addresses a set of core competencies for tobacco treatment specialists as defined by the Association for the Treatment of Tobacco Use and Dependence (ATTUD).
